

MS-RA205USP ULTIMATE STEREO PACK

Introducing the Ultimate Stereo Pack MS-RA205USP which combines the industry leading MS-RA205 marine stereo with FUSION-Link, MS-UNIDOCK Universal Media Device Dock, MS-BT100 Marine Bluetooth Streaming Module and the MS-RA200MP Mounting Plate together to create the perfect solution for any boater.

Combining the latest in FUSION-Link NMEA 2000 connection options with unparalleled iPod/iPhone and MTP playback options the Ultimate Stereo Pack is the most innovative marine entertainment solution currently on the market.

When used in conjunction with the UNI-Dock the pack adds another element; environmental protection. Able to house and protect the latest Apple iPhone 5s, Samsung Galaxy S5 and other leading smartphones, the UNI-Dock is the perfect charging station for your precious smartphone.

For instances when streaming is preferable to docking, the MS-BT100 bluetooth module will enable on-the-move access to the paired devices music library. With track selection managed through the paired device, its easy to find the perfect song without the need to return to the stereo.

Supported FUSION-Link Multi-Function Display manufacturers include: Simrad, Lowrance, Garmin, B&G and Humminbird - refer to fusionelectronics.com/fusion-link for supported models. This world leading connectivity and control is only offered by FUSION.

Replacing a generic sized "non marine" stereo with the FUSION MS-RA205 is simple with the MS-RA200MP DIN sized mounting plate, which easily covers an existing mounting hole with a flat plate with FUSION cut out included.
